

## **UNIVERSIDAD DE LAS FUERZAS ARMADAS - ESPE**

### **02 Project Interview**

#### **Team 09 – No Leader Team**

**Members:** Melanie Terán, Salma Villegas, Joel Zeas

**Leader:** Joel Zeas

**Project Name:** Catering Planner

**Interviewed Name:** Erika Rivadeneira

**Profession:** Chef

### **Questions and Answers**

#### **1. What work activity do you carry out?**

Well, the main activity as a chef in the catering where I work is to organize the staff, delegate functions, cook and be aware of everyone's activities. Well, actually my role doesn't end there. Since we receive a work order, I have to make the shopping list, I have to do calculations, branches, I take care of the food preparation and as I mentioned, I am also in charge of the staff. We have some departments, the area of the pastry shop, we have a warehouse area and I am in charge of the hot and cold area of the kitchen.

#### **2. What is the biggest problem that you register in your work activity?**

One of the things that costs us a lot at the beginning is the issue of the shopping list. Once we receive the work order and they tell us, for example, we have a wedding of about 100 people, having to make the shopping list is one of the complications because it takes a lot of time.

#### **3. How would you like this problem to be solved?**

I would very much love to have a system in which I automatically enter the recipe or the dish that we are going to prepare and automatically I have already solved the issue of the shopping list.

**4. What would be the special request that the programmers make to design this program?**

If they can develop a system, a program that, even in the kitchen, works with many other programs, for example in which standard recipes and others are made. If one makes my work easier, it solves this for me. I was delighted.

**5. Would this program make your work easier?**

Yes, indeed yes. I have many functions, many things in charge. Then yes it would already be a peso less. Of course, everything that can streamline me, whatever, whatever may be practical for me, avoid setbacks, save me money and time would be great.
